

## 高二英语第一期 • 选词填空自测

注意：限时 8 分钟

## II. Grammar and vocabulary

## Section B

**Directions:** Complete the following passage by using the words in the box. Each word can only be used once. Note that there is one word more than you need.

A. assessed	B. translated	C. demonstrated	D. intention	E. additional
F. clues	G. prospective	H. evident	I. reveal	J. correlate
K. perspective				

The way people walk can provide \_\_1\_\_ about their personality, claims a new study.

Using motion capture technology, researchers found that movements \_\_2\_\_ certain personality traits, such as aggression, agreeableness and extroversion.

The technology is widely used in film to capture the movements of an actor, which are then \_\_3\_\_ to an animated character on screen.

The study, carried out by researchers at the University of Portsmouth, found that the exaggerated movement of both the upper and lower body indicated aggression. The study also found that personality traits that help with social skills - such as agreeableness and extroversion - were particularly \_\_4\_\_ in people with increased pelvis(盆骨) movement alone, or 'hip sway'.

The researchers were surprised to find evidence of personality traits not typically related to social skills in the form of 'openness to experience' or creativity and conscientiousness.

'Less overall movement in a walk (so little swagger and little sway in a walk) could predict how creative someone is and how well organized they are,' Mr Satchell told MailOnline.

The study \_\_5\_\_ the personalities of 29 participants using a standard personality test called the 'big five'. This enabled them to identify personality traits including openness, conscientiousness, extroversion, agreeableness and neuroticism(神经质).

'We know of no other examples of research where gait(步态) has been shown to \_\_6\_\_ with self-reported measures of personality and suggest that more research should be conducted between automatic movement and personality,' said Mr Satchell.

It is hoped that being able to identify a possible relationship between a person's walk and their \_\_7\_\_ to engage in aggression could be used as a crime prevention strategy.

'If CCTV observers could be trained to recognize the aggressive walk \_\_8\_\_ in this research, their ability to recognize \_\_9\_\_ crimes could be improved further,' said Mr Satchell.

The researchers are keen to carry out \_\_10\_\_ studies and have called more members of the public to get involved.
